EDUCATION

University of California, Irvine

2025 - 2027

- B.S., Computer Science | GPA: 3.89
 - *Key Coursework*: Data Structures and Algorithms, Programming in C/C++, Intermediate Programming in Python, Introduction to Software Engineering, Linear Algebra, Human and Computer Interaction
-

SKILLS

- **Languages**: Java, Python, C++, JavaScript, TypeScript, SQL, HTML/CSS, R
 - **Frameworks & Libraries**: React, Next.js, OpenCV, Scikit-learn, Node.js
 - **Tools & Databases**: Git, GitHub, Firebase, Tableau, Figma
-

EXPERIENCE

Donald Bren School of Information and Computer Sciences | *Learning Assistant*

March 2025 - Present

- Provided technical mentorship to 100+ students, translating advanced Python topics including recursion, iterators, and object-oriented programming into understandable terms.
 - Debugged student code during office hours, diagnosing logical errors and improving algorithmic efficiency.
-

TECHNICAL PROJECTS

[Vitacore](#) - VenusHacks Hackathon | *Next.js, React, Firebase, OpenCV, FastAPI*

May 2026

- Engineered VitaCore, a women's cardiovascular health app featuring secure Firebase Auth/Firestore onboarding, responsive 3D vitals visualization, and an intuitive Apple Health style symptom logging interface.
- Architected an end-to-end contactless vitals pipeline utilizing browser-based rPPG and a FastAPI backend with OpenCV, MediaPipe, and open-rppg to extract BPM/HRV from 30-second face scans.
- Developed Hera, a grounded health assistant leveraging Retrieval-Augmented Generation (RAG) over a curated medical vector index and Google Gemini, enforcing robust safety guardrails via intent routing and confidence thresholds.

[Emoji Prediction](#) - Datathon | *Python, Jupyter Notebook, Google Colab*

April 2026

- Developed a multi-class NLP model using TF-IDF and bigrams on 225,000 tweets, optimizing Logistic Regression accuracy across 10 emoji categories.
- Improved model fairness across imbalanced classes (up to 5:1 ratio) as measured by weighted F1 score of 0.52 from 0.46, by implementing balanced class weighting and vocabulary filtering to prevent majority-class bias.

[Hobscotch](#) - Designathon (Top 5 Finalist, Professional Track) | *Figma, Product Design*

April 2026

- Co-designed "Hobscotch," a peer-to-peer skill-sharing application aimed at reducing social isolation, earning a Top 5 placement out of 20 competing teams.
 - Executed user research and competitive analysis across 6 industry rivals and 34 user touchpoints, translating data-driven insights into product requirements and feature roadmaps.
 - Architected high-fidelity UI prototypes in Figma, utilizing advanced components, variants, and auto-layout to establish a scalable, accessible design system for the core application flow.
-

CAMPUS INVOLVEMENT

Information and Computer Science Student Council (ICSSC) | *Corporate Outreach Chair*

Nov 2025 - Present

- Planned and moderated Execs in Tech, a flagship panel featuring executives and founders from Taco Bell, First American, and others, drawing high student engagement and strengthening ICSSC's corporate relationships.
- Coordinated a Google Spruce Goose site visit for 30 students, managing end-to-end logistics to ensure a zero-friction experience for industry partners and university participants.
