EDUCATION

University of California, Irvine

2025 - 2027

- B.S., Computer Science | GPA: 3.90
 - *Key Coursework:* Data Structures and Algorithms, Design and Analysis of Algorithms, Introduction to Artificial Intelligence, Machine Learning and Data-Mining, Introduction to Software Engineering
-

SKILLS

- **Languages:** Java, Python, C++, JavaScript, TypeScript, PHP, SQL, HTML/CSS, R
 - **Frameworks & Libraries:** React, Next.js, FastAPI, Laravel Dusk, Pest, OpenCV, MediaPipe, Scikit-learn
 - **Tools & Databases:** Git, GitHub, Jenkins CI/CD, MySQL, Figma, Agile/Kanban
-

EXPERIENCE

Office of Information Technology at UC Irvine | *Web Application Quality Assurance Engineer* July 2026 - Present

- Developed automated end-to-end test suites using Laravel Dusk, PHP, and Pest, reducing manual testing time and improving regression coverage for critical UCI academic applications.
- Executed comprehensive manual and exploratory testing across PHP/MySQL systems within an Agile/Kanban workflow, identifying high impact defects prior to release and improving overall product stability.
- Integrated automated test pipelines into Jenkins CI/CD, enabling continuous browser testing and reducing deployment-blocking bugs.
- Collaborated with software engineers and UX designers to refine features, clarify requirements, and ensure high-quality releases for tools used by thousands of students and staff.

Donald Bren School of Information and Computer Sciences | *Learning Assistant*

March - June 2026

- Mentored 100+ students in advanced Python concepts including generators, recursion, iterators, and object oriented programming, improving assignment completion rates and conceptual mastery.
 - Diagnosed logical and performance issues in student code during office hours, teaching debugging strategies and optimizing algorithmic efficiency.
-

TECHNICAL PROJECTS

[VitaCore](#) - **VenusHacks Hackathon** | *Next.js, React, Firebase, OpenCV, FastAPI*

May 2026

- Co-built VitaCore, a cardiovascular health platform with secure Firebase Auth/Firestore, responsive Next.js UI, and 3D vitals visualization.
- Engineered a full contactless vitals pipeline using OpenCV, MediaPipe, FastAPI, and open-rppg, extracting BPM/HRV from 30-second face scans with high signal stability.
- Developed Hera, a safety-aligned RAG health assistant using Gemini and a custom medical vector index, implementing intent routing and confidence thresholds to enforce strict safety guardrails.

[Emoji Prediction](#) - **Datathon** | *Python, Jupyter Notebook, Google Colab*

April 2026

- Built a multi-class NLP classifier using TF-IDF and bigrams on 225k tweets, optimizing Logistic Regression accuracy across 10 emoji classes.
 - Improved weighted F1 score from 0.46 to 0.52 by applying balanced class weighting and vocabulary filtering to mitigate 5:1 class imbalance.
-

CAMPUS INVOLVEMENT

Information and Computer Science Student Council (ICSSC) | *Corporate Outreach Chair*

Nov 2025 - Present

- Planned and moderated Execs in Tech, a flagship panel featuring executives and founders from Taco Bell, First American, and others, drawing high student engagement and strengthening ICSSC's corporate relationships.
- Coordinated a Google Spruce Goose site visit for 30 students, managing end-to-end logistics to ensure a zero-friction experience for industry partners and university participants.
